Hello everyone and a good morning to all. You are listening to one of the synthesizer model created by a Team of 3 students from computer science department. The team members are Jeff, Aswin and Dinesh under the guidance of our beloved counsellor This works on the basis of recognizing the text in a textbook and airing it over to the audience through the built-in audio systems. It is implemented with the main cause of helping the blind people who are eager to drown in the knowledge ocean. Taking their earnest eagerness and curiosity into account, we come up with service which is user-friendly and free of cost.
